

The Week of:

March 2, 2022

What's your life like:

Highs and Lows of the Week:

- Go around the room and have each student talk about the high point and low point of their week.

What are we talking about this week:

Bible Verses

- Isaiah 40:26

Main Points of the Message

- You were created with value that does not come from someone else, it comes from God.
- The Bible is not anti-science. Science and the Bible often have different objectives, but that does not mean that they cancel each other out. When they work together, they can provide a holistic picture of God's good world.

Discussion Questions

- Has the Bible ever felt confusing to you? How?
- Have you ever read the whole Bible? Why or why not?
- Do you think science and the Bible can work together? Why or why not?
- Do you ever feel like believing in the Bible means that you can't believe in science? Why or why not?
- Have you ever seen a miracle?
- How would you describe a miracle?
- Does believing in miracles create a beautiful or unrealistic picture of reality?
- What are some of the ways science and the Bible can work together to create a more holistic picture of how the world works?

Now what:

- This week, read Genesis chapter 1 (creation story) and Matthew chapter 8 (Jesus's first miracles), and write down what you notice: (how these stories make you feel, how science and observation interact with these stories).
